## Table Games Rating & Comping System

**TableComp** is a flexible Table Games Rating and Comping System that allows you easily track Player Ratings, Compliments and Player Incidents. Three separate modules combine to give complete control and flexibility over the entire system.

**TableComp Security** controls user access to each function within the application. Permissions are based on the employee's NT Username and Password and cannot be by-passed. All transactions, including Supervisor Overrides, are stamped with the employee's logon credentials.

The main module, **TableComp**, allows access to all player and casino information. All customized data such as Player information, Comp Types, Comp Codes, Pit Codes, Game Codes and Table Codes is easily maintained.

**TableComp Reporting** provides 14 reports with an unlimited number of variations. Four conditions can be set to define many exception and performance reports. The TableComp database format allows any reporting tool to easily access all data and generate any custom report not provided.

## Features

- ☞☞ Supported on Windows NT / 2000
- ☞☞ Supports all network operating systems
- ☞☞ Employee Information is entered from NT Domain lists.
- ☞☞ Customized Data for :
